

NAS Migration

OVERVIEW

This Starter Pack contains the software and live help for installation, initial migration, and cutovers, plus ongoing support needed to make your migration between any network-attached storage (NAS) platforms fast and low risk.

Driven by the world's leading unstructured data management software and supported by the world's best unstructured data management experts, this Starter Pack provides you with all the essential requirements for making your NAS migration project a success.

Please read the detailed documentation about Datadobi's migration products [here](#) before purchasing this Starter Pack.

WHAT'S IN THE STARTER PACK?

- DobiMigrate® software (contact us for larger projects):
 - SMB: Up to 50TB
 - Commercial: Up to 200TB
 - Enterprise: Up to 500TB
- 24 hours of live support (delivered remotely):
 - Project kick-off
 - DobiMigrate setup
 - Migration startup
 - Initial cutover(s) to the new platform
 - Additional support
- Access to the support portal
- DatadobiDriven certification

CONDITIONS

Before purchasing this Starter Pack for a migration of any of the following, please contact Datadobi:

- Migration of WORM or compliance data
- Migration of multiprotocol access (SMB and NFS) on same file data
- Migration of archived/tiered data
- Migration of object data
- Migration to a NAS gateway
- Migration to tape
- Migration to cloud
- Migration involving hardlinks
- Use by a Service Provider for multiple projects

REMOVES THE RISK AND PAIN

- Realize the real ROI of your new hardware by getting there fast.
- Reduce the risk inherent in a complex manual process.
- Minimize disruption to daily business.
- Focus your time on more business-useful tasks.
- Make informed decisions about project objectives.
- Easily adapt to changing business priorities.
- Facilitate communication with all levels of the organization.

EASILY HANDLES COMPLEXITY

- SMB and NFS datasets.
- Incompatible settings between source and target systems.
- Metadata including permissions.
- Cutover workflow with a very short downtime window.
- Transfer of shares and share ACLs.*
- Transfer of NFS exports and client lists using IPs, hostnames, subnets, or netgroups.*
- Creation of migration shares and exports.
- Proving chain of custody.
- Rollback.

* For API integrated systems and systems that support MSRPC calls.

DATADOBIDRIVEN TRAINING

DatadobiDriven® is the professional training program for Datadobi's global Authorized Service Partners. As part of purchasing this Starter Pack, you can take part in the DatadobiDriven Administrators' certification.

DatadobiDriven Certified Administrators gain detailed and in-depth knowledge on running a migration project using DobiMigrate. This level of DatadobiDriven is customized specifically for data center managers, system administrators, and project managers who need to run one or more projects for their own company.

When the training is complete you will be able to:

- Deploy and configure DobiMigrate.
- Plan, set up, and run an end-to-end NAS migration.
- Understand how to monitor the progress.
- Cut over to the new system.
- Troubleshoot basic issues.
- Create reports for all levels of the organization.

DatadobiDriven Certification Training is delivered through a series of videos available on Datadobi's dedicated training portal. After successful completion of a multiple-choice exam, you will receive a Datadobi Certified Administrator welcome pack.
